

## **General syllabus for doctoral (third-cycle) studies in Wood Science and Engineering at Luleå University of Technology**

Decided by the Chair of TFN 16 June 2022.

### **1. Subject description**

English name: Wood Science and Engineering

Wood Science and Engineering includes an interdisciplinary approach on the wood material and industrial processes covering the value chain from forest to wood products. Research areas are anatomy, physics, chemistry, and mechanics related to wood, as well as wood processing and products engineering, manufacturing technology, process optimization and visualization for wood based products.

### **2. Programme aim and intended learning outcome**

The aim of the doctoral (third-cycle) studies in Wood Science and Engineering at the University is to give the doctoral student specialised knowledge in Wood Science and Engineering, in-depth knowledge of different research methods and a good understanding of the challenges related to research and its practical application. The overall objective of the programme is that the doctoral student develops into a critical and autonomous researcher in Wood Science and Engineering, able to plan and carry out research projects. The doctoral student shall fulfil all the qualitative targets specified in the Higher Education Ordinance as well as in the locally decided qualitative targets, if any (see attached Annex A).

### **3. Admission requirements and selection**

#### 3.1 General entry requirements

An applicant meets the general entry requirements for doctoral (third-cycle) studies if he or she has been awarded a Master's (second-cycle) qualification, has satisfied the requirements for courses comprising at least 240 credits, of which at least 60 second-cycle credits, or has acquired substantially equivalent knowledge in another way, in Sweden or elsewhere (Higher Education Ordinance (2010:1064) Chapter 7 Section 39).

#### 3.2 Specific entry requirements

In addition to the general entry requirements, good skills in oral and written communication in English is required for admission to doctoral (third-cycle) studies in Wood Science and Engineering.

#### 3.3 Selection

In selecting among applicants who meet the requirements, their ability to benefit from the course or the study programme shall be taken into account. However, the fact that an applicant may be credited for previous courses and study programmes or for professional or vocational experience may not alone give the applicant priority over other applicants (Higher Education Ordinance (2010:1064) Chapter 7 Section 41). The University's local guidelines in the Admissions procedure for doctoral (third-cycle) studies must also be applied.

*This document is a translation of the Swedish original. In the event of any discrepancy between the translated document and the Swedish original, the original shall prevail.*

---

The following criteria will be used in the selection of applicants for doctoral (third-cycle) studies in Wood Science and Engineering:

- Assessment of the applicant's ability to benefit from third-cycle courses and study programmes in the research subject in accordance with criteria for methodical cogency, theoretical awareness, critical thinking capacity, autonomy and originality, and communicative skills.
- Previous studies and knowledge: the study programme(s)/course(s) completed by the applicant and results thereof.
- Specific subject knowledge relevant for the specific project for the studies.
- Personal characteristics, relevant for third-cycle courses and study programmes.
- Degree projects (master's thesis) or other written work.

#### **4. The degree**

The doctoral (third-cycle) studies lead to a Degree of Doctor. Wood Science and Engineering, a student admitted to doctoral studies has the right to be awarded a licentiate degree after having completed at least 120 credits of the programme leading to a Degree of Doctor.

##### 4.1 Degree requirements

For a Degree of Doctor, the doctoral student shall

- have been awarded a pass grade for courses of at least 60 credits
- have been awarded a pass grade for a research thesis (doctoral thesis) of at least 150 credits.

The thesis and the courses shall together amount to 240 credits for a Degree of Doctor.

For a Degree of Licentiate, the doctoral student shall

- have been awarded a pass grade for courses of at least 30 credits.
- have been awarded a pass grade for a licentiate thesis of at least 60 credits.

The thesis and the courses shall together amount to 120 credits for a Degree of Licentiate.

##### 4.2 Titles of degree

- After the completion of the Degree of Doctor in Wood Science and Engineering the doctoral student is awarded the title Doctor of Philosophy in Science.
- After the completion of the Degree of Licentiate in Wood Science and Engineering, the doctoral student is awarded the title Licentiate of Science.

A request of a title of degree other than the stipulated may be submitted in accordance with laid down guidelines.

#### **5. Programme structure and implementation**

##### 5.1 Programme scope and structure

The doctoral (third-cycle) programme includes two blocs; courses and thesis work. The programme comprises four years (two years for the licentiate degree). In case the doctoral student has a doctoral studentship and carries out departmental duties to a certain extent (no more than 20% of the whole programme), a corresponding prolonged period may be approved.

---

## 5.2 Individual study plan and supervision

An individual study plan outlining the implementation of the studies is drawn up for each doctoral student. The plan is established in consultation with the supervisor is decided by the Head of Department by delegation of the Vice-Chancellor. The plan is reviewed and revised at least once a year.

The Head of Department shall appoint at least two supervisors, one of whom is appointed principal supervisor, for each doctoral student. The person appointed principal supervisor shall have at least qualifications required for appointment as a docent and be employed by the University. A principal supervisor who no longer meets the job requirements may continue as supervisor until the doctoral student completes his or her studies, by an individual agreement with the relevant department. The doctoral student is entitled to supervision during the studies, unless the Vice-Chancellor has decided otherwise in accordance with the Higher Education Ordinance (2010:1064) Chapter 6 Section 30. A doctoral student who so requests may have another supervisor (Higher Education Ordinance (2010:1064) Chapter 6 Section 28). The request does not need a justification.

## 5.3 Courses

The individual study plan shall specify the courses to be included in the doctoral student's education. The goal attainment is examined according to the examination procedure specified in the course syllabus. Credits may be transferred in accordance with the local guidelines in the Admissions procedure for doctoral (third-cycle) studies.

Compulsory course for both licentiate degree and doctoral degree is: Philosophy of Science. How to Write Scientific Papers and a Doctoral Thesis, or equivalent course.

Knowledge about gender equality must be ensured within the doctoral program, which can be done through a course or in another way.

## 5.4 Thesis

The thesis may take the form of either a single coherent work (a monographic thesis) or a compilation comprising a number of scientific articles interrelated by an introductory summary chapter (a compilation thesis). Quality and scope requirements for the research activities do not differ between the two alternatives. The scientific articles or, as appropriate, the monograph must be of such quality that they meet reasonable requirements for publication in a peer-reviewed scientific forum.

The doctoral (third-cycle) studies is preferably carried out within a position as a doctoral student with at least 80 percent time for the doctoral studies. The research work is independent with own responsibility that increases towards the end of the education. Supervision is given throughout the education with emphasis on the first part of the education. When it comes to courses, there is an emphasis to finish courses during the first part of the education. The research is reported via articles in peer-reviewed scientific journals and presentation of articles at scientific conferences within the subject, but popular science presentations at industrial conferences and collaborative projects may also occur to a lesser extent.

A monograph is individually written by the student and is normally around 200 pages long.

*This document is a translation of the Swedish original. In the event of any discrepancy between the translated document and the Swedish original, the original shall prevail.*

---

Although a monograph dissertation can be submitted, a compilation thesis for both licentiate degree and doctoral degree is recommended within the subject Wood Science and Engineering.

A compilation thesis dissertation within Wood Science and Engineering subject shall consist of a thesis section of approx. 50 pages for a licentiate dissertation and approx. 75-100 pages for a doctoral dissertation, which gives a synthesis of completed dissertation work, as well as at least 2 (licentiate thesis) or 4 (doctor thesis) attached articles in peer-reviewed scientific journals. In addition to this, both peer-reviewed articles in scientific journals and articles presented at scientific conferences can be attached. A compilation thesis shall clearly show the doctoral student's individual contribution and the contribution of the other co-authors.

Normally, at least two articles in a compilation thesis and one article in a licentiate thesis must be accepted for publication in peer-reviewed scientific journals. As with monographic theses, it is the combined assessment of the scientific quality of the compilation thesis that determines whether the thesis will receive a pass grade.

The introductory summary chapter shall include a separate section describing the doctoral student's contribution to the articles.

The doctoral thesis shall be defended at a public defence seminar. The grades for the thesis are either 'pass' or 'failed'. When grading the thesis, the content and the defence of thesis shall be taken into account. The grade of a doctoral thesis is decided by an examining committee, appointed anew for each thesis.

A doctoral student wanting to be awarded a Degree of Licentiate shall, after consultation with his or her supervisor, request approval from the responsible Head of Department. The doctoral student defends his or her licentiate thesis at a licentiate seminar after which the thesis is graded 'pass' or 'failed'. When grading the thesis, the content and the defence of the thesis is taken into account. An examiner, appointed by the Head of Department, grades the licentiate thesis.

## **6. Entry into effect and interim regulations**

The previous general syllabus will cease to apply for third-cycle students who are admitted to studies at third-cycle level after 2022-06-16.

If agreed between the third-cycle student and the supervisors, the new general syllabus (LTU-46-2022) may be used as a steering document for a previously admitted third-cycle student.

It must be documented in the third-cycle student's individual study plan which general syllabus that applies.

*This document is a translation of the Swedish original. In the event of any discrepancy between the translated document and the Swedish original, the original shall prevail.*

---

## **ANNEX: QUALITATIVE TARGETS**

### **Qualitative target in accordance with the Higher Education Ordinance (HF)**

#### **Degree of Doctor**

##### Knowledge and understanding

For the Degree of Doctor, the doctoral student shall

1. demonstrate broad knowledge and systematic understanding of the research domain as well as advanced and up-to-date specialised knowledge in a limited area of the research domain, and
2. demonstrate familiarity with research methodology in general and the methods of the specific research domain in particular.

##### Competence and skills

For the Degree of Doctor, the doctoral student shall

3. demonstrate the capacity for scholarly analysis and synthesis as well as to review and assess new and complex phenomena, issues and situations autonomously and critically
4. demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake research and other qualified tasks within predetermined time frames and to review and evaluate such work
5. demonstrate through a dissertation the ability to make a significant contribution to the formation of knowledge through his or her own research
6. demonstrate the ability in both national and international contexts to present and discuss research and research findings authoritatively in speech and writing and in dialogue with the academic community and society in general
7. demonstrate the ability to identify the need for further knowledge, and
8. demonstrate the capacity to contribute to social development and support the learning of others both through research and education and in some other qualified professional capacity.

##### Judgement and approach

For the Degree of Doctor, the doctoral student shall

9. demonstrate intellectual autonomy and disciplinary rectitude as well as the ability to make assessments of research ethics, and
10. demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used.

##### Research thesis (doctoral thesis)

For the Degree of Doctor, the doctoral student shall have been awarded a pass grade for a research thesis (doctoral thesis) of at least 120 credits.

*This document is a translation of the Swedish original. In the event of any discrepancy between the translated document and the Swedish original, the original shall prevail.*

---

## **Degree of Licentiate**

### Knowledge and understanding

For a Degree of Licentiate, the doctoral student shall

1. demonstrate knowledge and understanding in the research domain including current specialist knowledge in a limited area of this field as well as specialised knowledge of research methodology in general and the methods of the specific field of research in particular.

### Competence and skills

For a Degree of Licentiate, the doctoral student shall

2. demonstrate the ability to identify and formulate issues with scholarly precision critically, autonomously and creatively, and to plan and use appropriate methods to undertake a limited piece of research and other qualified tasks within predetermined time frames in order to contribute to the formation of knowledge as well as to evaluate this work,
3. demonstrate the ability in both national and international contexts to present and discuss research and research findings in speech and writing and in dialogue with the academic community and society in general, and
4. demonstrate the skills required to participate autonomously in research and development work and to work autonomously in another qualified capacity.

### Judgement and approach

For a Degree of Licentiate, the doctoral student shall

5. demonstrate the ability to make assessments of ethical aspects of his or her own research,
6. demonstrate specialised insight into the possibilities and limitations of research, its role in society and the responsibility of the individual for how it is used, and
7. demonstrate the ability to identify the need for further knowledge, and take responsibility for his or her ongoing learning.

### Thesis

For a Degree of Licentiate, the doctoral student shall have been awarded a pass grade for a research thesis of at least 60 credits.
